Dear Bill,

Our 80 KW backup generator is now operational and it has provided 8 hours of generation during several relatively short recent power outages. Many thanks for your assistance throughout the lengthy and complicated process of completing this installation. The key to our success was that you maintained excellent and timely communications with me throughout the process.

Other contractors wanted me to install a propane generator and then convert it to natural gas after the natural gas lines were installed. I appreciated that you had the patience to allow the gas lines to be installed first, thereby avoiding any possible conversion issues and extra costs. You were most helpful in working with Washington Gas to get them moving forward on the project and to help assure that they did not negatively impact our driveway and landscape.

Rather than just suggest a generator size, I appreciated how you coordinated well with Airtron and Waterfurnace (geo thermal system) to obtain the optimal size generator for our large electrical loads.

You did an excellent job of supervising your installation team and they performed in a professional manner during all aspects of the job. The quality of their workmanship was excellent.

I would recommend you and your team to anyone thinking about buying a generator and would be pleased to speak with prospective customers.

Sincerely,

Gerry A.  
McLean VA
